

DUKE UNIVERSITY MEDICAL CENTER

CURRICULUM VITAE

for
Permanent Record
and the
Appointments and Promotions Committee

Date Prepared: February 7, 2022

Name: Christopher W. Woods, MD, MPH

Primary academic appointment: Department of Medicine

Primary academic department: Department of Medicine

Secondary appointment: Department of Pathology
Duke Global Health Institute

Present academic rank and title (if any): Professor of Medicine with Tenure
Duke University Medical Center
Chief, Infectious Diseases
Durham VA Medical Center

Date and rank of first Duke Faculty appointment:
July 1, 2002, Assistant Professor of Medicine

Medical Licensure: North Carolina License # 95-01460
Date of License: July 15, 1995

Specialty certification(s) and dates (Month/Day/Year):
American Board of Internal Medicine, 1997, Renewal 2012
American Board of Internal Medicine, Infectious Diseases, 2002, Renewal 2012
American Board of Pathology, Medical Microbiology, 2003

Place of birth: Atlanta, Georgia, USA
Citizen of: United States of America

<u>Education</u>	<u>Institution</u>	<u>Date</u>	<u>(Year)</u>	<u>Degree</u>

Areas of research interest:

Infectious Disease Genomic Medicine Program: This program has been supported since 2005 through NIH, DARPA, Bill and Melinda Gates Foundation, W.G. Coulter Foundation, DTRA, and industry partners. Team Science is practiced by the interdisciplinary group of investigators including clinician scientists, microbiologists, immunologists, mathematicians, statisticians, and engineers. The ultimate goal is the development of a more precise means of guiding anti-infective therapeutics in the acute care setting using multidimensional genomic signatures. Christopher Woods oversees this program through his role as Director, Applied Genomics, Center for Applied Genomics and Precision Medicine.

Other areas of interest.

- Molecular epidemiology
- Sepsis diagnostics
- Global Health Education
- Bioterrorism and Emerging Infectious Diseases
- Vectorborne Diseases
- Community-acquired *Clostridium difficile* infections
- Endocarditis

Unique Resources:

The Molecular Epidemiology Research Laboratory (MERL) is a developmental extension of the Durham Veterans Affairs Medical Center Clinical laboratory. The laboratory is supervised by Dr. Bradly Nicholson. The laboratory brings to bear expertise in classical clinical microbiology, epidemiology, clinical research, and molecular microbiology. The laboratory has developed standardized operating procedures for the collection, processing, and storage of clinical research samples for use in a diverse range of clinical diagnostic studies. For example, the laboratory has directed the sample collection, processing, and detection of diverse pathogens of early phase host response diagnostic development through a series of offsite human viral challenge studies (Human rhinovirus, n=2; Respiratory Syncytial Virus, n=2; and Influenza, n=4) funded by the Defense Advanced Research Projects Agency (DARPA). More than 150 subjects

representing over 50,000 aliquots have been handled as part of this diagnostic development program. The laboratory also supports several large, free-living cohort studies for the development and validation of host response diagnostic tests. As an offshoot of a CLIA approved laboratory, the laboratory also participates in Phase II, III, and FDA registration studies with commercial partners.

The MERL uses diverse classical and molecular diagnostic methodologies to identify the etiologic agent in viral, bacterial, and fungal infections. Current technologies include selective media, antigen detection, and specific, broad-range, and multiplex polymerase chain reaction using a variety of amplification and detection platforms. After identification, organisms can be further characterized on site by phenotypic, metabolic, or nucleic acid bases typing techniques such as Ribotyping, Pulsed Field Gel Electrophoresis, or Multi-Locus Sequence Typing (MLST)

The Triangle Acute Infectious Diseases Clinical Research Unit (AIDCRU) is a shared clinical research resource for acute care settings. The primary unit operates at Duke University Health System, but affiliated programs exist at the Durham Veterans Affairs Medical Center and the University of North Carolina Hospitals. The mission of the unit is to coordinate screening and enrollment of patients into clinico-epidemiological studies in acute care clinics, the emergency department, and intensive care units at Duke University Medical Center. The unit was established to focus on the development of a well-characterized biorepository for research into genomic and other host markers of acute infectious disease. The unit includes both a clinical research staff and a supporting molecular diagnostic laboratory.

As a shared resource, the unit is led by Christopher Woods and governed by a group of collaborating investigators from the Duke Department of Medicine (Divisions of Infectious Diseases and Pulmonary/Critical Care) and the Duke Department of Surgery, Division of Emergency Medicine, and the Durham VA Health System.

Duke CAGPM Biorepository (<https://precisionmedicine.duke.edu/researchers/biobank>)

Given the complexity of human biological specimen collections and associated genomic research programs, and the importance of high-quality and well-annotated samples for the research planned in this proposal, it is imperative to develop the appropriate processes and infrastructure to collect, handle, and track these specimens in an accurate and secure manner. This includes deploying a web-based system to support the collection, annotation, storage, handling, and distribution of samples as they are made available to the program, all of which will be subjected to robust quality assurance and chain of custody programs.

Facility Description: This facility is distributed to three locations – a laboratory ‘portal’ for specimen influx/efflux (Fitzpatrick-CIEMAS Bldg, Rm 2149), mid/long-term storage located in a dedicated freezer facility in Duke Environmental Safety Bldg, and long-term storage outsourced to an off-site vendor facility in Research Triangle Park, NC. Each location is access-restricted to biobank personnel only and provides appropriate environmental controls, and each freezer unit is linked into an active-response freezer monitoring system (Minus80 Monitoring Inc) and is connected to emergency generator back-up power.

Sample data management and analysis: The Biorepository employs LabVantage™ for the integrated collection, annotation, inventory management, and distribution of biospecimens. The web-based LabVantage™ system, in conjunction with standard operating procedures (SOPs) provide the program management, annotation, inventory management tools, and software components necessary to maintain a comprehensive and efficient banking program with the appropriate safety and bioethics framework. LabVantage™ supports all aspects of biobanking including data entry, barcode-based chain-of-custody tracking and inventory management, specimen annotation, query and data reporting, while providing security and access restrictions ensuring data privacy (HIPAA) and integrity. This infrastructure supported 33 research projects resulting in the acquisition and banking of ~340,000 biospecimens since 2007.

Genomic Assay and Diagnostic Device Development (GAD3) Lab: The Laboratory is supervised by Thomas Burke, PhD, and was established as a strategic collaboration between CAGPM and the Pratt School of Engineering. The laboratory is located in Fitzpatrick-CIEMAS Building Rm 2149 with ~1000 sq.ft. dedicated “wet” laboratory workspace designed and equipped for the handling, processing, and characterization of sensitive clinical genomic samples, extraction and purification of nucleic acids from a range of endogenous sources (including human tissue and fluid specimens), and to perform quality analysis of endogenous or synthetic RNA or DNA samples and standards. The lab plays the important roles of creating “calibration” quality test standards, developing novel methods and assays for targeted measure of

analytes, and migrating, refining and validating molecular signatures with prototype diagnostic technologies. The laboratory also serves as the staging point for influx of biospecimens into the CAGPM Biobank and efflux of specimens for molecular analyses.

Lab equipment include: ViiA7 real-time PCR system (Applied Biosystems) with Twister automated plate loader, Mastercycler Pro thermal cycler (Eppendorf), QIAcube automated sample processing system for nucleic acid purification (Qiagen), Bioanalyzer 2100 (Agilent), Nanodrop 2000 spectrophotometer and Qubit 4 fluorimeter (Thermos Fisher) for nucleic acid QC, Biofire FilmArray and BD Veritor instruments for rapid pathogen testing, gel electrophoresis equipment and imager (BioRad), tissue homogenizer, benchtop centrifuge and microcentrifuges, analytic and top-loading balances, -80°C and -20C freezers (monitored, alarmed, backup power), +4C refrigerator and cold room, PCR workstation with HEPA filtration, biosafety cabinet, chemical fume hood, and UPS power supply and generator backup for critical equipment.

External support - gifts, grants, and contracts:

Dr. Woods has a dual appointment at Duke University and the Durham VAMC (6/8).

Industry Sponsored Clinical Trials

Duke University lists aggregated effort assigned to the following eligible industry-sponsored clinical trial projects. Each of these individual projects has a varying need of effort depending on the type of activity currently in progress such as protocol development, start-up, patient recruitment, enrollment, follow-up, monitoring, data analysis, publication, and closeout. Faculty determine each project's need and adjust their effort between projects within the total aggregated effort assigned to the clinical projects.
